Phone/WA : +62 811 450 580

PRODUCT OVERVIEW

Bio M2 Liquid Organic Fertilizer raw material in the form of cow waste and urine that has been fermented through biogas digester as well as additional organic matter so that it is rich in nutrients needed by soil and plants such as Nitrogen, Phosphorus and potassium.

All the workforce involved are locals who have been trained and given an understanding of organic farming. Production capacity is about 15-20 tons per month. The amount can still be increased because of the raw materials that are quite abundant around the production site.

PRODUCT OVERVIEW

Quality testing has been conducted through a laboratory and test effectiveness on agricultural land by institutions appointed by the Ministry of Health Agriculture of the Republic of Indonesia.

An audit has been conducted by a certification body Organic, so it is entitled to install labels Organic SNI in BIO M2 packaging.
