About Solid Wood Flooring

Solid wood or parquet is made up of individual wood blocks which are then arranged into a parquet pattern. Parquet flooring has been around since the 17th century and it remains a popular flooring style today.

ARANA Solid Wood is completely waterproof, indentation resistance and durability, while reducing sound transmission. We only choose a high quality, authentic & durable option for a timeless foundation for your home.

Using Teak and Merbau wood, these particular types of wood is most popular in building very high-quality wholesale furniture in Indonesia. The demand for this Indonesian wood types is always on the increase across the world.

More about **Teak Wood**

Teak woods (*Tectona Grandis*) tree grew well in Java island, Indonesia (from West to East Java) which has a hot temperature. Central Java is a perfect place to plant and produce a high-quality teak wood

Teak wood is famous for its strength and density and it affects this wood's durability. It is mostly used for outdoor furniture, but also a lot for high-quality indoor furniture.

This wood has a brown color and dark-brown color for its veins, those veins have space from one another.

More about **Merbau Wood**

Merbau (*Intsia spp.*) is a luxurious hardwood prized for its dark red colour and durability. Merbau trees are part of tropical rain forest trees. It grow rapidly in Indonesia, especially on the island of Papua / Irian. Our merbau wood comes from Papua / Irian to feed international demand for flooring, decking, doors and furniture.

Merbau wood is quite strong, durable and stable as an alternative in comparison with teak. Merbau wood has Durability Class I / II and Strength Class I / II. Merbau wood has been proven to be resistant to insects.
