BEST PRODUCT  
FROM INDONESIA

CV. Marcapada Nusantara

# Introduction

WE ARE COMPANY ENGADED IN  
THE EXPORT OF COCONUT  
DERIVATIVE PRODUCTS

**INDOCONESIA**  
Exploring and Discovering Nature

# About Us

INDOCONESIA is a company engaged in the production of coconut derivative product and trading national and international commodities. We believe that a good innovation shift in the present will have a good result in the future. For this reason, INDOCONESIA came up with the idea of change in the agricultural sector with a youthful spirit.

# Our Product

We Sell Coconut Derivative Products :

- Coconut Fiber
- Coconut Peat
- Coconut Charcoal (Briquete)
- Virgin Coconut Oil

*CV. Marcapada Nusantara*

# Coconut Fiber

- Coconut fibre or coir, is a natural fibre extracted from the outer husk of coconut. Coir is the fibrous material found between the hard, internal shell and the outer coat of a coconut and used in products such as floor mats, doormats, brushes and mattresses.
- Coconut fiber has a high lignin content and thus a low cellulose content, as a result of which it is resilient, strong and highly durable. The remarkable lightness of the fibers is due to the cavities arising from the dried out sieve cells.
- The best grade fibers are light in color, gold-yellow (fiber from unripe coconuts) or brown (fiber from ripe coconuts).

# Coconut Peat

- Cocopeat is natural fiber made out of coconut husks. The extraction of coconut fiber from husks gives us this byproduct called coco-peat. The fibrous coconut husk is pre washed, machine dried, sieved and made free from sand and other contaminations such as animal and plant residue.
- Cocopeat is 100% natural multi purpose growing medium. Coco peat for plants is also known as coir.
- Cocopeat is a very good alternative to traditional peat moss and Rock wool. Its air filled porosity and high water holding capacity makes it, an ideal growing medium for the plant crops. It is 100% organic and eco friendly,

# Coconut Charcoal

- We can produce briquettes in any desired shape or size and tailor make packaging according to our customers exact design preferences. We insist on producing our own raw coconut shell charcoal for the majority of our briquette production and also working with a few select suppliers of high grade charcoal, to ensure that the fixed carbon content is high and ash content low. Our briquettes are perfect for use in Shisha/hookah or for barbecue, providing very high heat, long burn time and minimal ash. Due to the high quality charcoal used, our briquettes produce no smoke, odors or sparks during burning.

# Virgin Coconut Oil

- Virgin Coconut Oil is extracted from the fresh grated white flesh of strictly graded high quality Coconuts to procure the richest extract. The creamy flesh of the coconut is separated through a meticulous series of centrifuges at low temperatures. An old fashioned cold press method is then used to distil the oil into traditional wooden Kohlus, without the application of heat so as to retain the oil's nutrients and its superior quality. This organic oil is exceptionally rich with a delicate sweet flavour. A regular massage with this tones, relaxes and nourishes the skin and muscle tissue as well as flushes the toxins from the body to give lustre to the skin. This multi-purpose oil can also be applied to the hair for its nourishing and conditioning qualities.
