About PT Skafina Niaga Asia

PT Skafina Niaga Asia

Was founded with the aim of establishing a strategic trade route in the modern business world. Our company engaged in trading natural resources such as agricultural and plantation products as well as non-agricultural products and their derivatives. With an increasingly modern business ecosystem, **PT SKAFINA NIAGA ASIA** aims to build strategic trade routes by empowering major manufacturers and suppliers to provide the best agricultural and plantation products to meet the needs of both new and existing international markets at competitive prices and excellent.

Located in Indonesia, we can supply the world's high caliber products, such as Palm Kernel Meal, Palm Kernel Shell, Organic Coconut Sugar, Spices and other agricultural products, which are our specialty

VISION and MISSION

Vision

To become a formidable trading company with strategic cooperation between countries so that it becomes one of the market leaders in Asia

Mission

- Creating availability of resources based on sustainable trade cooperation by fostering competitive human resources
- Creating innovative, creative, and competitive corporate governance towards market share international market
- Improve the company's integrity by following the direction of future policy developments at the international level
- Conduct monitoring, review, and strategic updates to be adaptive in modern business dynamics
- Create ideal relationships with corporate partners

Palm Kernel Meal

is a by-product of crushing and extracting oil from Palm Kernel. PKE is generally known as a quality animal feed that contains high levels of crude protein and moderate energy levels. It is completely safe to feed as a supplement to most classes of livestock.

The results showed that the fat, fiber, mineral and protein content of PKE made it a nutritious animal feed. PKE contains about 55-70% fiber, which is an important nutrient for dairy cows.

Furthermore, PKE has a high ratio of phosphorus to calcium, which is essential for the formation of healthy bones and teeth as well as biochemical cycles. PKE is also a useful source of protein and energy.

Finally, because most are produced using a mechanical screw extraction process, most PKEs are free of chemicals and genetically modified organisms. Today, PKE is well established as a key animal feed ingredient for the dairy industry.

Palm Kernel Shell

are the remaining shell fragments after the palm kernels are removed and crushed in the Palm Oil Mill. Palm shell is a fibrous material and easy to handle until this product is ready to be marketed.

The moisture content in palm kernel shells is low (11% - 13%) compared to other biomass residues with different sources. Palm shells contain residues of palm oil parts suitable for heating at slightly higher values than most Lignocellulosic biomass. When compared with other industrial biomass residues, palm kernel shells are a good quality fuel with uniform size, easy crushing and fast combustion process due to low humidity levels.

The fibers and shells produced by palm oil are generally used as fuel for steam boilers. The steam produced is used to run turbines that produce electricity. The two fuels are able to produce more than enough energy to meet the energy needs of the palm oil mill.

Granule Organic Coconut Sugar

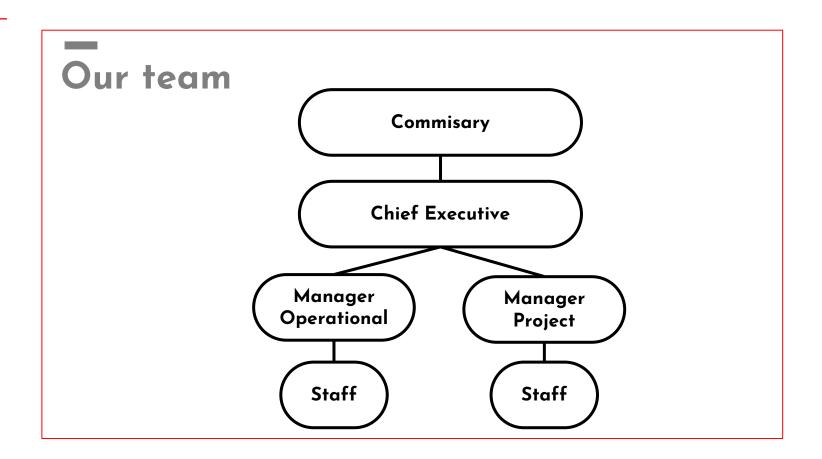

is a powdered version of brown sugar and is often referred to by people as crystal sugar. This product is also called ant sugar because the shape of this sugar resembles an ant's house nesting in the ground. The basic ingredient for making ant sugar is sap from coconut trees or palm trees. Because these two trees belong to the palmae plant species, in International languages, palm sugar is generally only referred to as Palm Sugar or Palm Zuiker.

Coconut sugar Indonesia more often referred to as Javanese sugar, brown sugar or GULA SEMUT, is a natural sweetener made from coconut tree sap, then the coconut tree sap juice is heated to remove the water content. After drying, the coconut sugar can be molded into block coconut sugar or palm sugar.

Organic coconut sugar is one of the natural sweeteners that has a very low glycemic index level, besides coconut sugar has more nutrients than other sweeteners. Ecologically, coconut trees also have a high level of survival, so coconut sugar is very sustainable or easy to renew.
